PRODUCT GUIDE

ACP / ACM panels

ACM combines aluminum faces with a core. Compare single colours and paired faces, then select the listed sheet size and thickness. Confirm face finish and project suitability before ordering.

Confirm colours, finishes and paired faces.

Single colours

- White and black have the widest option ranges.
- Other single colours have separate listings.
- Confirm the current brand.

Paired faces

- Black/White includes two sheet formats.
- Silver/Gold, Silver/White and Yellow/Red also listed.
- Check the face pair on the selected panel.

Confirm the core, aluminum skin thickness and coating.

Composite panel

- Panel thickness is not face thickness.
- Confirm the exact core and coating.
- Provide drawings for custom-cut enquiries.

Ideas for your project

Retail display. Confirm the finish and mounting. The frame is outside the panel supply.

Retail and exhibition displays

Send the frame opening and fixing arrangement for a display-panel enquiry.

Signs and printed graphics — Choose the visible face and finished sign size; confirm graphics compatibility.

Feature panels and wayfinding — Plan face colours and supports for an information or directional display.

Custom-cut projects — Supply a dimensioned drawing with cutouts, visible faces and quantities.

Choose the right product

Describe the job and location — Describe the use, location, visible faces, frame and graphics. Outdoor or building-related work needs confirmation for the exact supplied panel and supporting system. [S1, S2, S3]

Choose the colour or face pair — Choose the named colour or face pair. Names do not establish sheen, coating or an exact colour match; request a physical sample when appearance matters. [S1]

Check the exact size and thickness — Check the exact listed combination: sizes and thicknesses vary by colour. White 4 × 10 ft is nominal 1/8 inch (3 mm); nominal labels are not measured tolerances. [S1]

Specify the finished piece — Send finished dimensions, units, quantity, visible faces, drawing revision, holes and cut-outs. Confirm custom cutting and edge requirements before ordering. [S1, S3]

Confirm the supplied panel and supporting system — Request exact manufacturer documentation for core, aluminum skin gauge, coating, fixing design and application limits. General brochure wording does not establish approval for a building or mounting system. [S2, S3]

Handling, installation & care

Handling and storage instructions — Product-specific handling and storage instructions are missing. Request the supplied manufacturer’s guidance for sheet support, stacking, protective film and transport before moving or storing panels. [S2, S3]

Fabrication and installation — The brochure mentions cutting and routing without technical settings or fixing instructions. Obtain fabrication and mounting guidance for the exact panel, finish and support. [S2, S3]

Cleaning and graphics care — No product-specific cleaner or maintenance schedule is documented. Request care instructions for the actual coating and graphic, and confirm cleaner and adhesive compatibility before use. [S1, S2, S3]

Sources & details to confirm

Core, brand and technical ratings — The older brochure uses the word “Dibond” and describes a polyethylene core, alongside broad weather-resistance and cladding claims. The current listings do not identify the supplied brand, exact core, aluminum skin gauge, fire classification or certified system. These claims must not be carried across to every current item. [S1, S2]

Brochure sizes versus current choices — The older brochure lists 4 × 8 and 5 × 10 ft. Current White and Black / White also list 4 × 10 ft, nominal 1/8 inch. Confirm exact options, stock and custom work. [S1, S2]

Appearance and tolerances — Current names identify colours and face pairs, but do not specify finish sheen, colour-match tolerance, dimensional tolerance or reverse-face details for single-colour listings. [S1]
