PRODUCT GUIDE

FRP & wall panels

Plan a complete FRP finish: choose an embossed panel colour and sheet size, then match joints, corners and adhesive to your room layout. Compare the listed options below.

Generated white FRP sample illustration; representative texture, not an exact colour or thickness reference.

Embossed panels

- Six named colours.
- Listed thickness: 0.090 in.
- Confirm colour with a physical sample.

Generated panel-edge context; trim profiles are not pictured. Confirm profile geometry and fit.

Joints & corners

- Divider and end-cap profiles.
- Inside and outside corners.
- Measure quantities from your room layout.

Generated wall context; adhesive packaging is not shown. Confirm the supplied brand and compatibility.

Panel adhesive

- Confirm current brand and pail size.
- Identify the existing substrate and coating.
- Use the matching installation instructions.

Ideas for your project

Plan an interior wall finish — Map wall sizes, openings and joints before selecting the panel lengths.

Finish joints and corners — Count each seam, corner and exposed edge separately.

Coordinate panels and adhesive — Identify the wall substrate and coating before choosing glue.

Choose the right product

1. Describe the room — Describe walls or ceilings, moisture, heat and cleaning exposure. Confirm the fixing system for the actual panel supplied. [S1, S2]

2. Set the colour and finish — Choose from six embossed colours. Check a physical sample when matching existing finishes. [S1]

3. Compare sheet layouts — All colours list 4 × 8 ft sheets. White also lists 9, 10 and 12 ft lengths. Compare layouts; request custom dimensions and cutouts by quote. [S1]

4. Count the finishing pieces — Count joints, corners and exposed edges. Confirm trim length, colour and fit for the 0.090 in panel. [S1]

5. Confirm the installation materials — Identify the substrate and existing finish. Confirm the supplied adhesive, pack size, coverage and application instructions. [S1]

Handling, installation & care

Before cutting or fixing — Obtain the supplied panel’s storage, cutting, protection, joint and fixing instructions before starting. [S2]

Before applying glue — Follow the actual adhesive instructions for surface preparation, application, working conditions and cure time. [S1, S2]

Before choosing cleaners — Confirm approved cleaners and chemical guidance with the panel manufacturer before choosing a cleaning routine. [S1, S2]

Sources & details to confirm

Confirm before ordering — Confirm fire, food-area and chemical requirements: no grade or test ratings are supplied. Also confirm trim dimensions/colour/fit and adhesive brand, pack size, compatibility and coverage. [S1, S2]
