PRODUCT GUIDE

High Impact Wave Acrylic

Compare three listed wave-acrylic finishes: Textured Clear, Smooth Clear and Prismatic Bronze. Each has its own listing; confirm the material grade, dimensions and suitability before planning your project.

Generated clear-profile illustration. Textured Clear and Prismatic Bronze finishes are not shown.

Clear wave profile

- Three separately named finishes.
- Listed 1/8 in thickness and 4 x 12 ft sheets.
- Request actual samples for texture and bronze colour.

Ideas for your project

Match a specified finish — Use the full finish name and SKU when matching an order.

Prepare a custom-cut panel request — Send finished dimensions, quantity and a drawing for a custom-cut enquiry.

Plan a consistent group of panels — List each panel size and quantity; confirm a physical finish sample.

Choose the right product

Start with the job requirements — Describe the intended use and required performance. Ask Supply Kings to confirm the supplied grade; the product name alone does not establish an impact, fire, UV or glazing rating. [S1, S2, S3]

Choose the finish by its full name — Choose Textured Clear, Smooth Clear or Prismatic Bronze by its full name. Request a physical sample when colour or texture must match another panel. [S1, S2, S3]

Check the listed sheet format — Each listed variant is 1/8 in thick and 4 x 12 ft. Confirm usable dimensions and tolerances before designing a close-fitting part. [S1, S2, S3]

Specify finished dimensions separately — For cut pieces, send finished width, height, quantity, finish and a drawing showing holes or openings. Supply Kings will confirm feasibility and the quotation. [S1, S2, S3]

Confirm collection or freight before arranging transport — Confirm stock and pickup readiness before arranging transport. Freight and custom dimensions are quoted separately; identify whether you need full sheets or cut pieces. [S1, S2, S3]

Handling, installation & care

Handling and storage instructions to obtain — Manufacturer handling and storage instructions are not available in the reviewed sources. Request guidance for the supplied grade, including protective film, lifting, support and storage. [S1, S2, S3]

Installation details to confirm — Fixing, expansion, hole-size and sealant requirements are unverified. Provide the installation drawing and ask for the supplied grade's instructions before fitting panels. [S1, S2, S3]

Cleaning and care information to request — An approved cleaner list is not available in the reviewed records. Request care guidance for the selected finish before using solvents, abrasives, coatings or cleaning products. [S1, S2, S3]

Sources & details to confirm

Applications and performance are still to be verified — The owner-confirmed records establish the three finishes, thickness and sheet format. They do not identify a manufacturer datasheet, resin grade, impact test value, fire classification, UV rating, outdoor-service specification or light-transmission value. Common installed uses therefore cannot be recommended as verified for this range yet. Supply the project requirements and ask for the supporting specification. [S1, S2, S3]

Nominal dimensions and visual references — The current options do not give thickness tolerances, usable-sheet tolerances or a quantified texture specification. Confirm these details for close-fit parts and finish matching. The label High Impact Wave Acrylic is the catalogue product name; it is not a stated test result or certification. [S1, S2, S3]
