PRODUCT GUIDE

Specialty products

Find the right starting point for hockey practice, a custom AC window insert, small workshop projects or formed panels. Compare the product families, then check the exact options for your project.

Generated equipment reference; confirm target dimensions, net fit and included items.

Practice products

- Confirm target dimensions and net fit.
- Shooting-pad options are listed separately.
- No skating or impact rating is established.

Generated fitting example; each opening, fitting and mount requires measurements.

AC window inserts

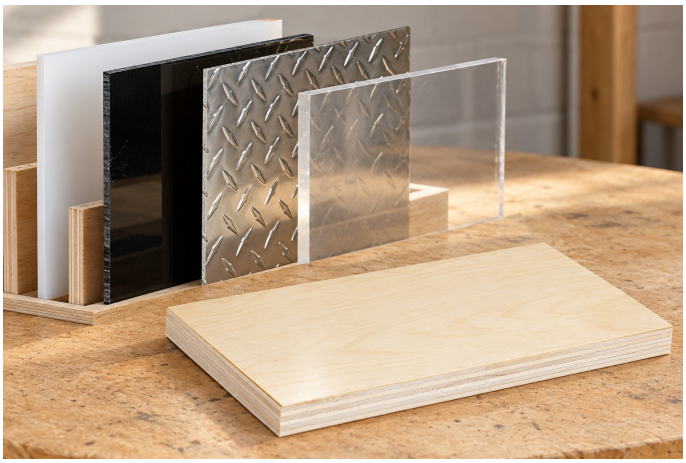

- Measure the opening and hose fitting.
- Confirm the mounting arrangement.
- Each insert is made around the agreed dimensions.

Generated representative colours and textures; confirm selected 4335 finish and grade.

Boltaron sheet

- Five colour listings.
- Confirm the exact 4335 grade and finish.
- No approval or fire rating is implied.

Generated material context; off-cut contents vary. Plywood species and finish require confirmation.

Plywood & off-cuts

- Off-cut materials and sizes vary.
- Confirm plywood species and finish.
- Send finished dimensions and quantities.

Ideas for your project

Set up a practice station — Check the available space, pad size and target-to-net fit.

Fit an AC exhaust panel — Measure the window opening, hose fitting and agreed mounting arrangement.

Plan a fabricated part — Send finished part dimensions, cutouts and visible faces with your enquiry.

Choose the right product

Start with the finished job — Send the intended use, finished dimensions and quantity, with a drawing for fitted or fabricated parts. [S1]

Check the exact option — Choose the colour before the thickness. Beige Boltaron lists 0.060 in only; shooting pads have four standard sizes plus custom. [S1]

Confirm the appearance — Use a physical sample to match colours and surfaces. Confirm plywood face grade and finish. [S1]

Resolve fit before fabrication — Confirm net fit, window measurements or your part drawing before cutting. Check the actual contents of off-cut bundles. [S1]

Handling, installation & care

Hockey products — Confirm target attachments and included components. Available sources do not establish an impact rating or skating suitability. [S1, S2]

Fitted inserts and fabricated sheets — Obtain mounting, cutting or forming instructions for the actual material supplied before starting work. [S1]

Cleaning and care — Ask for material-specific cleaning instructions before choosing solvents or surface treatments. [S1, S2]

Sources & details to confirm

Shooter Tutor dimensions — An older description combines a 55 × 37 in panel with a 3 × 4 ft junior-net claim. Confirm the actual panel, net fit and supplied straps. [S1]

Boltaron grade and documentation — Current listings say 4335 despite a legacy 4330 URL. Any required traceability, fire performance or aviation acceptance needs documentation for the exact supplied grade and gauge. [S1]

Custom sizes and variable stock — AC insert dimensions, plywood grade and finish, and off-cut contents need confirmation. Brochure puckboard sizes are not shooting-pad options. [S1, S2]
